<b>Program:</b> B Tech (All Program except CSBS, CSDS-311) / MBA Tech (All Program)/ B Tech Integrated (Computer/Mechanical)				<b>Semester :</b> II/VI	
<b>Course:</b> Linear Algebra and Differential Equations				<b>Code:</b> 702BS0C051	
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>	
<b>Lecture (Hours per week)</b>	<b>Practical (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Internal Continuous Assessment (ICA) (Marks - 50)</b>	<b>Term End Examinations (TEE) (Marks- 100)</b>
3	0	1	4	Marks Scaled to 50	Marks Scaled to 50
<b>Pre-requisite:</b> Knowledge of fundamental concepts in Algebra, Differential and Integral Calculus.					
<b>Course Objective</b> This course aims to instil in prospective engineers knowledge of concepts and techniques in Linear Algebra and Differential Equations. It also prepares the students to deal with advanced level of Mathematics and applications that would be essential for their disciplines.					
<b>Course Outcomes</b> After completion of the course, students will be able to- <ol style="list-style-type: none"> <li>1. Demonstrate understanding of the fundamental concepts of Linear Algebra and carry out related computational skills</li> <li>2. Use effective mathematical methods for solving Differential Equations</li> <li>3. Analyse functions, matrices and equations</li> <li>4. Apply Calculus techniques and Algebraic skills to solve real life problems</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1.	<b>Linear Equations and Vector Spaces</b> Rank of Matrix, System of linear equations, Vector space, Subspace of vector space, Linear span, Linear independence and dependence, Basis, Dimension.				10
2.	<b>Linear Transformation and Eigenvalues</b> Linear transformation, Matrix associated with linear transformation, Composition of linear maps, Kernel and Range of a linear map, Rank-Nullity Theorem, Inverse of a linear transformation, Cayley- Hamilton Theorem, Eigenvalues, Eigenvectors, Eigenvalues of symmetric, skew-symmetric, Hermitian and Skew-Hermitian matrices, Diagonalization, Orthogonal Diagonalization of a real symmetric matrix.				12
3.	<b>First order Ordinary Differential Equations</b> Exact equations, Equations reducible to exact equations using integrating factors, Linear equations, Bernoulli equation, Orthogonal trajectories.				5

<b>Program:</b> B Tech (All Program except CSBS, CSDS, CSDS-311, Mechanical, Civil)/ MBA Tech (IT, Computer, Data Science)				<b>Semester:</b> II	
<b>Course:</b> Quantum and Statistical Physics				<b>Code:</b> 702BS0C009	
<b>Teaching Scheme</b>			<b>Evaluation Scheme</b>		
<b>Lecture (Hours per week)</b>	<b>Practical (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Internal Continuous Assessment (ICA) (Marks - 50)</b>	<b>Term End Examinations (TEE) (Marks- 100)</b>
2	2	0	3	Marks Scaled to 50	Marks Scaled to 50
<b>Prerequisite:-</b>					
<b>Course Objective</b> This course is aimed to teach the drawbacks of classical physics in explaining several experimental observations and old quantum theory; and to discuss the necessity of new mechanics and the laws related to it.					
<b>Course Outcomes</b> After completion of the course, students will be able to- <ol style="list-style-type: none"> <li>1. Define and illustrate the basic laws related to quantum and statistical mechanics</li> <li>2. Interpret the concepts related to quantum and statistical mechanics to explain observed phenomena in nature</li> <li>3. Apply the concepts of quantum and statistical mechanics to solve different engineering problems</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1.	Introduction to Quantum Physics, Black body radiation, Explanation of it using the photon concept, Photoelectric effect, Compton effect, de Broglie hypothesis, Experiments demonstrating wave properties of electron: Electron interference (double slit experiment), Electron Diffraction (Davison - Germer experiment), Uncertainty Principle. Wave-particle duality, Born's interpretation of the wave function, Verification of matter waves, Uncertainty principle.				6
2.	Basic postulates of quantum mechanics, concept of wave function, Superposition principle of eigenstates. Concept of collapse of wave function. Time dependent and time independent Schrodinger Equation, Concept of free particle, particle in an infinite and finite potential well, box problem. Bound vs. unbound states.				8
3.	Concept of Quantum Tunnelling. Reflection and Transmission coefficients. Few realistic examples of tunnelling, e.g., alpha decay, Probe microscopes (Scanning Tunnelling microscope). Simple Harmonic Oscillator, explanation in 1D (no detailed derivation). Hydrogen atom.				6
4.	Introduction to Statistical Physics. Ensembles (Canonical, Micro canonical and Grand canonical) Classical (Maxwell-Boltzmann) and Quantum statistics, [Bose Einstein (BE) and Fermi Dirac (FD)]. Derivation of classical statistics and BE and FD statistics.				6

<b>Pre-requisite:-</b>					
<b>Course Objective</b> The main objective of this course is to equip the students with the ability to solve, assemble and test simple AC and DC electrical circuits. Further, the course also enables the student to obtain a basic understanding of the working principle and applications of electronics devices.					
<b>Course Outcomes</b> After completion of the course, students will be able to- <ol style="list-style-type: none"> <li>1. Interpret DC circuits, theorems and time domain analysis of first order RL circuit</li> <li>2. Solve series and parallel AC circuits and compare star/delta configurations</li> <li>3. Explain the principles of transformer and electrical machines</li> <li>4. Understand the construction, working principle and applications of electronics devices and logic circuits</li> </ol>					
<b>Detailed Syllabus</b>					
Unit	Description				Duration
1.	<b>DC Circuits</b> Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff's current law, Kirchhoff's voltage laws, Analysis of simple circuits with dc excitation, Superposition Theorem, Thevenin's Theorems, Norton's Theorems. Time-domain analysis of first-order RL circuits.				6
2.	<b>AC Circuits</b> Generation of alternating emf, instantaneous, rms, peak, average values and related other terms, vector representation of AC quantities, Steady state analysis of R, L, C series and parallel circuits, resonance. Generation of three-phase emf, star connection, delta connection, relationship between line and phase quantities.				8
3.	<b>Transformers and Electrical Machines</b>				6

**Pre-requisite** - Nil

**Course Objective**

This course gives the basic working knowledge required for the production of various engineering products. It is the backbone of the real industrial environment which helps to develop and enhance relevant technical hand skills required by the engineer working in the various engineering industries and workshops.

**Course Outcomes**

After completion of the course, the student will be able to -

1. Identify correct testing instruments and tools for various tasks
2. Build PCB circuits using through hole and SMD components for small applications
3. Make use of required electrical components for building domestic wiring circuits
4. Assemble PC hardware and configure network topology

**Detailed Syllabus**

<b>Unit</b>	<b>Description</b>	<b>Duration</b>
1.	<b>Familiarization and application of testing instruments and commonly used measuring instruments and tools</b> Multimeter, Function generator, Power supply, Digital Storage Oscilloscope (DSO) etc. Soldering iron, De-soldering pump, Pliers, Cutters, Wire strippers, Tweezers, Crimping tool, Hot air soldering and de-soldering.	4
2.	<b>Printed circuit boards (PCB)</b> Types, Single sided, Double sided, PTH, Processing methods, schematics design using open source software and fabrication of a single sided PCB for a simple circuit with manual etching (Ferric chloride) and drilling. <b>Soldering and Joining Processes -</b> Introduction, Techniques and circuit assembly. Assembling of electronic circuits using SMT (Surface Mount Technology) components/stations.	8
3.	<b>Study, demonstration and identification of common electrical materials such as wires, cables, switches, fuses and connectors</b>

**Laboratory Work**

6 to 8 laboratory exercises (and a practicum) based on the syllabus.

List of experiments:

1. To identify electronic components with specification (Functionality, type, size, color coding, package, symbol, cost etc). (wires, Cables, Connectors, Fuses, Switches, Relays, Heat sink etc.)
2. To understand and use measuring and testing instruments (Multimeter, Function generator, Power supply, Digital Storage Oscilloscope)
3. To design PCB schematics using suitable software.
4. To fabricate single sided PCB for a simple electronic circuit.
5. To assemble and test an electronic circuit.
6. To study functioning of circuit breakers.
7. Experiment based on house hold wiring of appliances such as fan, tube light etc.
8. Dis-assemble and assemble of PC.
9. To configure LAN, switch and router for network topology.
10. To simulate and implement simple applications using ARDUINO.
11. Practicum

<b>Prerequisite:</b> HSC level Chemistry					
<b>Course Objective</b> The aim is to acquaint students with engineering materials like lubricants, polymers, nanomaterials and composites. Also to familiarize them with the industrial importance of water chemistry, application of fuels and concept of metal corrosion.					
<b>Course Outcomes</b> After completion of the course, the student will be able to - <ol style="list-style-type: none"> <li>1. Rationalize fundamentals of corrosion and materials</li> <li>2. Understand basic concepts in water, combustion of fuels and polymer chemistry</li> <li>3. Solve numerical problems based on water, fuels and combustion, lubricants</li> </ol>					
<b>Detailed Syllabus: (per session plan)</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1.	<b>Polymers</b> Introduction, basic concepts of degree of polymerization, tacticity, melting and glass transition temperature and its importance. Types of polymerization (Addition, condensation and co-polymerization). Smart polymer materials, conducting polymers, liquid crystals, applications of polymers.				<b>05</b>
2.	<b>Lubricants</b> Definition, Mechanism of lubrication, Properties- viscosity, viscosity index, flash & fire, cloud & pour points, oiliness, saponification & acid value (numericals based on saponification and acid value)				<b>04</b>
3.	<b>Fuels &amp; Combustion</b> Discuss the definition, classification and characteristics. Calculation of Calorific value-Theoretical & Experimental method (Bomb calorimeter). Solid Fuels: Coal, proximate and ultimate analysis, Numerical based on analysis of coal. (Dulong's formula) and bomb calorimetry. Combustion: calculation on air and oxygen requirement.				<b>06</b>

<b>Pre-requisite</b> Nil					
<b>Course Objective</b> The knowledge of Physics relevant to engineering is critical for converting ideas into technology. An understanding of Physics also helps engineers understand the working and the limitations of existing devices and techniques, which eventually leads to new innovations and improvements. This course aims to make students understand the basic concepts of Physics thoroughly with a view to lay foundations for the various engineering courses.					
<b>Course Outcomes</b> After completion of the course, students will be able to- <ol style="list-style-type: none"> <li>1. Relate and interpret the relationship and interaction between the nature and the matter with a scientific outlook</li> <li>2. Identify and apply different processes of physics that have wide applications in industrial and technological sectors</li> <li>3. Develop creative thinking, problem solving abilities and considerable scientific skills, viz. experimental, observational, manipulative, investigatory and decision making etc.</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1.	<b>Semiconductors Physics</b> Formation of energy bands and classification of solids into conductors, semiconductors and insulators, direct and indirect band gap semiconductors, fermi levels in semiconductor, energy gap and its temperature dependence, physics of semiconductor junction, hall effect and application.				8
2.	<b>Optics</b> Interference: Thin film interference, wedge shaped film and Newton's rings and their applications. Diffraction: Fraunhofer and Fresnel diffraction, Fraunhofer diffraction at single slit, double slit, and multiple slits, Characteristics of diffraction grating and its applications.				9
3.	<b>LASER and Fiber optics</b> Introduction to interaction of radiation with matter, Population inversion,				9

	pumping, various modes, threshold, population inversion, Solid state LASER, Semiconductor LASER, Gas LASER, applications of lasers. Introduction, optical fiber as a dielectric wave guide, total internal reflection, numerical aperture and various fiber parameters, losses associated with optical fibers, step and graded index fibers, application of optical fibers.	
4.	<b>Electricity and Magnetism</b> Laws and applications of electrostatics and magnetostatics, Maxwell's equations and applications, introduction to waveguides.	6
5.	<b>Nuclear and Plasma Physics</b> Introduction to nuclear physics, types of nuclear reactions, nuclear fission as a source of energy, Particle accelerators: Cyclotron, Synchrotron, Nuclear radiation counters: Geiger Muller Counter, scintillation counter. Basic concepts of Plasma physics: Plasma as a state of matter, Debye length, plasma frequency, collisions, dc conductivity, ac conductivity Applications of plasma physics.	8
6.	<b>Modern Engineering materials</b> (Introduction and basic properties of each material) Nanomaterials, Superconductors, Dielectrics, metallic glasses, biomaterials.	5
	<b>Total</b>	<b>45</b>

**Pre-requisite:-**

**Course Objective**

The course would enable students to get a brief introduction of the Indian Constitution and its principles. The students would have knowledge of concept of 'State' and interdependencies of its institutions vis a vis their relation with fundamental rights.

**Course Outcomes**

After completion of the course, students will be able to-

1. Understand the historic evolution of the Indian Constitution, its drafting, nature and to understand the principles mentioned in its Preamble
2. Inculcate fundamental rights in its true sense and also the permissible restrictions upon it so as to enjoy these rights within permissible limits while simultaneously performing their duties and to apply these principles into their professional lives
3. Ingrain the structure of our polity and role of Judiciary in maintaining the basic structure of the Constitution
4. Attain knowledge of the Emergency provisions, when and how it is imposed, to know the additional powers the bestowed upon the Government at times of Emergency and to understand the Amendment procedure

**Detailed Syllabus**

<b>Unit</b>	<b>Description</b>	<b>Duration</b>
1.	Nature, Characteristics and Sources of Indian Constitution	2
2.	Fundamental rights and Fundamental duties – Concept of State, Right to Equality under Articles 14 and 15, Right to certain freedoms under Article 19, Right to Life and liberty under Article 21, Right to religion under Article 25 and 26, Right to remedy under Article 32 and Fundamental duties	6
3.	Indian Judiciary – Concept of Supreme Court and High Courts, Appointment of Judges, Independence of Judiciary, Jurisdictions of Supreme Court and High Courts	3
4.	Emergency Provisions – Concept of National Emergency under Article 352, Financial Emergency under Article 360 and President rule under Article 356 of the Constitution	4

<b>Pre-requisite</b> Nil					
<b>Course Objective</b> The principal objective of this course is to provide a basic understanding of biological mechanisms of living organisms from the perspective of engineers. To encourage engineering students to think about solving biological problems with engineering tools. To make them aware of the application of engineering principles in biology and engineering robust solutions inspired by biological examples.					
<b>Course Outcomes</b> After successful completion of the course, student will be able to- <ol style="list-style-type: none"> <li>1. Convey that all forms of life have the same building blocks and yet the manifestations are diverse</li> <li>2. Identify and classify microorganisms while understanding molecular basis of DNA as a genetic material for information transfer</li> <li>3. Classify enzymes and distinguish between different mechanisms of enzyme action</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1.	<b>Introduction</b> Convey that Biology is as important a scientific discipline as Mathematics, Physics and Chemistry Bring out the fundamental differences between science and engineering by drawing a comparison between eye and camera, Bird flying and aircraft. Mention the most exciting aspect of biology as an independent scientific discipline. Why we need to study biology? Discuss how biological observations of 18th Century that lead to major discoveries. Examples from - Brownian motion and the origin of thermodynamics by referring to the original observation of Robert Brown and Julius Mayor. These examples will highlight the fundamental importance of observations in any scientific inquiry.				3

Mukesh Patel School of Technology Management & Engineering**

2.	<p><b>Classification</b></p> <p>Convey that classification per se is not what biology is all about. The underlying criterion, such as morphological, biochemical or ecological be highlighted. Hierarchy of life forms at phenomenological level. A common thread weaves this hierarchy Classification. Discuss classification based on (a) cellularity- Unicellular or multicellular (b) ultrastructure- prokaryotes or eucaryotes. (c) energy and Carbon utilization -Autotrophs, heterotrophs, lithotropes (d) Ammonia excretion - aminotelic, uricotelic, ureotelic (e) Habitata- aquatic or terrestrial (e) Molecular taxonomy- three major kingdoms of life. A given organism can come under different category based on classification. Model organisms for the study of biology come from different groups. E.coli, S.cerevisiae, D. Melanogaster, C. elegance, A. Thaliana, M. musculus</p>	6
3.	<p><b>Genetics</b></p> <p>Convey that "Genetics is to biology what Newton's laws are to Physical Sciences" Mendel's laws, Concept of segregation and independent assortment. Concept of allele. Gene mapping, Gene interaction, Epistasis. Meiosis and Mitosis be taught as a part of genetics. Emphasis to be give not to the mechanics of cell division nor the phases but how genetic material passes from parent to offspring. Concepts of recessiveness and dominance. Concept of mapping of phenotype to genes. Discuss about the single gene disorders in humans. Discuss the concept of complementation using human genetics.</p>	6
4.	<p><b>Biomolecules</b></p> <p>Convey that all forms of life has the same building blocks and yet the manifestations are as diverse as one can imagine Molecules of life. In this context discuss monomeric units and polymeric structures. Discuss about sugars, starch and cellulose. Amino acids and proteins. Nucleotides and DNA/RNA. Two carbon units and lipids.</p>	5
5.	<p><b>Enzymes</b></p> <p>Convey that without catalysis life would not have existed on earth Enzymology: How to monitor enzyme catalyzed reactions. How does an enzyme catalyze reactions. Enzyme classification. Mechanism of enzyme action. Discuss at least two examples. Enzyme kinetics and kinetic- parameters. Why should we know these parameters to understand biology? RNA catalysis.</p>	5

6.	<b>Information Transfer</b> The molecular basis of coding and decoding genetic information is universal Molecular basis of information transfer. DNA as a genetic material. Hierarchy of DNA structure- from single stranded to double helix to nucleosomes. Concept of genetic code. Universality and degeneracy of genetic code. Define gene in terms of complementation and recombination.	6
7.	<b>Macromolecular analysis</b> How to analyses biological processes at the reductionistic level Proteins- structure and function. Hierarch in protein structure. Primary secondary, tertiary and quaternary structure. Proteins as enzymes, transporters, receptors and structural elements.	5
8.	<b>Metabolism</b> The fundamental principles of energy transactions are the same in physical and biological world. Thermodynamics as applied to biological systems. Exothermic and endothermic versus endergonic and exergonic reactions. Concept of Keq and its relation to standard free energy. Spontaneity. ATP as an energy currency. This should include the breakdown of glucose to CO <sub>2</sub> + H <sub>2</sub> O (Glycolysis and Krebs cycle) and synthesis of glucose from CO <sub>2</sub> and H <sub>2</sub> O (Photosynthesis). Energy yielding and energy consuming reactions. Concept of Energy Charge.	5
9.	<b>Microbiology</b> Concept of single celled organisms. Concept of species and strains. Identification and classification of microorganisms. Microscopy. Ecological aspects of single celled organisms. Sterilization and media compositions. Growth kinetics.	4

<b>Pre-requisite: NIL</b>					
<b>Course Objective</b> This course provides basic orientation towards economic (micro and macroeconomics) principles and help them understand the functions of management. This course also aims to understand issues dealing with small-scale economic phenomena and concepts such as prices and output of firms, industries and resource owners along with examining market impact of technological change with regards to understand broader aspects of the economy and its environment.					
<b>Course Outcomes</b> After completion of the course, the student will be able to - <ol style="list-style-type: none"> <li>1. Illustrate basic concepts of economics (demand, supply, elasticity, scarcity) and explain behaviour on individual, households and firm and Handle economic data and write economic report,</li> <li>2. Analyse and evaluate the impact of Economic Policies and its implication on the Business Environment,</li> <li>3. Demonstrate and determine the students towards basic management principles and act as foundation for higher levels of learning and to be able to handle basic functions of management (planning, organizing, coordination, and control).</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1	<b>Introduction</b> Definition of Economics, Types of Economic Systems, Problem of Scarcity of Economic Resources. <b>Demand and Supply</b> Demand Curve and Supply Curve, Equilibrium of Demand and Supply, Shift in Demand and Supply. <b>Application of Demand and Supply</b> Price Elasticity of Demand, Price Elasticity of Supply, Factors which influence Elasticity, Elasticity and Revenue.				6

Approved in Academic Council dated 14.02.2020 for Academic year 2022-23

**SVKM's Narsee Monjee Institute of Management Studies  
Mukesh Patel School of Technology Management & Engineering**

2	<p><b>Market Structure /Industry Analysis Types of Competition</b> Monopoly, Oligopoly, Monopolistic Competition, Perfect and Imperfect Competition, Government Policies towards Industries. Circular Flow of Economy, Structures, Role of Government, Business Cycles.</p> <p><b>Macroeconomics</b> National Income - Gross Domestic Product (GDP), Gross National Product (GNP), Inflation - Cost Push and Demand Pull Inflation, Unemployment, Philips Curve.</p>	6
3	<p><b>Functions of Central Bank, Money supply, RBI &amp; Monetary Policy. (Current Credit Policy to be critiqued) Stabilization Policy</b> Role of Fiscal Policy. Demand and Consumer Behavior: Utility and Marginal Utility. New Economic Policy: Liberalization, Privatization and Globalization</p>	6
4	<p><b>Theory of Production</b> Law of Diminishing Returns, Returns to Scale, Productivity. Analysis of Costs: Types of Costs - Total Cost, Fixed Cost, Variable Cost, Marginal Cost, Impact of Marginal Cost on Average Cost.</p>	6
5	<p><b>Introduction to Management</b> Management &amp; Organizations, Management History. Understanding Management Thought, Contribution of F.W. Taylor, Henry Fayol, Elton - Mayo Contexts- Constraints &amp; Challenges. Planning: Managers as Decision Makers, Foundations of Planning, Strategic Management.</p>	9
6	<p><b>Organizing</b> Line and Staff Relationships, Centralization and Decentralization, Role of Delegation, Managing Human Resources, Managing Teams. Leading and Motivation: Basic Concepts and Practices -Maslow's, Herzberg, McClelland 's Theory of Achievement.</p>	6
7	<p><b>Controlling</b> Introduction to Controlling Inventory, Quality Control. Orientation towards Finance, Marketing, Human Resources and Operation Departments.</p>	6

<b>Program:</b> B Tech and MBA Tech. (All branches except CSEDS, CSBS and Civil )				<b>Semester:</b> I/II	
<b>Course:</b> Digital Manufacturing Laboratory				<b>Code:</b> 702MEOC016	
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>	
<b>Lecture (Hours per week)</b>	<b>Practical (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Internal Continuous Assessment (ICA) (Marks-50)</b>	<b>Term End Examinations (TEE) (Marks -100)</b>
0	2	0	1	Marks Scaled to 50	-
<b>Pre-requisite:</b> -					
<b>Course Objective</b> The course aims to introduce digital fabrication tools and methods. It familiarizes the students with various principles of 3D printing along with solid modeling, part slicing and fabrication using Fused deposition modelling (FDM) process.					
<b>Course Outcomes</b> After completion of the course, students will be able to - <ol style="list-style-type: none"> <li>1. Describe FDM Technology</li> <li>2. Prepare given model for 3D printing</li> <li>3. Create products of complex geometries using 3D printer</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1	<b>Introduction to Digital Manufacturing and Technical Design</b> Overview of 3D printing laboratory equipment, pre-fabricating requirements – printer bed size, hardware and materials required.				02
2	<b>3D Printing Process Steps</b> 3D printing concepts for converting CAD model into real parts, process steps involved in 3DP, creation of solid model, conversion to STL file, slicing the file or select a STL model from online resources, machine set up, build.				06
3	<b>3D Printing with Fused Deposition Modeling (FDM)</b> Operating principle and workflow of a Fused Deposition Modeling (FDM) 3D Printing machine, effect of layer thickness, infill density, part orientation and overhang angles on FDM printed parts, study of lithophane.				10
4	<b>Project Involving Ideation, Design and 3D Printing</b> Briefing of idea, designing of product, solid model creation, final fabrication using 3D printer.				12
	<b>Total</b>				<b>30</b>
<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Noorani, Rafiq, <i>3D Printing: Technology, Applications, and Selection</i>, 1<sup>st</sup> edition, CRC Press, 2017.</li> <li>2. <b>Reference Books</b> <ol style="list-style-type: none"> <li>1. Chua, C. L., Lim, K., <i>Rapid Prototyping: Principles and Applications</i>, 3rd Edition, World Scientific Publishing Co. Pte. Ltd., 2010</li> </ol>					

**SVKM's Narsee Monjee Institute of Management Studies  
Mukesh Patel School of Technology Management & Engineering**

**Laboratory Work**

6 to 8 laboratory exercises (and a mini project) based on the syllabus.

**List of Experiments**

- 1) To design an object using an open source software (Tinkercad).
- 2) To understand the working of slicing software (Repetier Host)
- 3) To examine the effect of layer thickness, infill density and orientation on build time and material consumption.
- 4) To generate code for designed object using Repetier host software for 3D printing.
- 5) To study the components of a Fused Deposition Modeling (FDM) 3D Printing machine.
- 6) To prepare FDM machine for printing the given object.
- 7) To print object using FDM machine.
- 8) To carry out post processing on the printed object.
- 9) To evaluate the effect of overhang angles on build quality of polylactic acid (PLA) and Acrylonitrile butadiene styrene (ABS) parts made using FDM.
- 10) To build parts of same geometry in PLA and ABS and compare the bending strength.
- 11) To create an object using lithophane technique.
- 12) Mini project.

<b>Program:</b> B Tech/MBA Tech (All branches except CSBS and CSDS)				<b>Semester:</b> I / II	
<b>Course:</b> Engineering Graphics and Design				<b>Code:</b> 702ME0C001	
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>	
<b>Lecture (Hours per week)</b>	<b>Practical (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Internal Continuous Assessment (ICA) (Marks-50)</b>	<b>Term End Examinations (TEE) (Marks-100)</b>
2	2	0	3	Marks Scaled to 50	Marks Scaled to 50
<b>Pre-requisite:</b> -					
<b>Course Objectives</b> This course is aimed at providing basic understanding of the fundamentals of Engineering Graphics; mainly visualization, graphics theory, standards & conventions of drawing, the tools of drawing and the use of drawings in engineering applications. The course has been structured to include sufficient simulations which would aid the student in visualization of three-dimensional objects and developing the drawing.					
<b>Course Outcomes</b> After completion of the course, students will be able to- <ol style="list-style-type: none"> <li>1. Interpret and communicate drawings effectively using different types of curves, lines, planes</li> <li>2. Analyze the concepts of projections and section of right regular solids with their development</li> <li>3. Apply the techniques, skills, and modern tools to create projections of machine components with the help of software</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1.	<b>Introduction to Engineering Drawing</b> Principles of engineering graphics and their significance, usage of drawing instruments, lettering, numbering; Conic sections (ellipse, parabola, hyperbola - general method only) including the rectangular hyperbola; cycloid, epi-cycloid, hypo-cycloid and involutes.				04
2.	<b>Projections of Lines and Planes</b> Introduction to projections of points, conventions; points locating in all quadrants. <b>Projections of Lines</b> Introduction, lines inclined to one plane and parallel to other plane, lines inclined to both planes. <b>Projections of Planes</b> Introduction, types of planes, plane surface inclined to both reference planes, projection of auxiliary planes				05
3.	<b>Projections of Regular Solids</b> Introduction to projection of regular solids, types of solids; Projections of regular solids (prisms, pyramids, cylinders, cones) covering those inclined to both the reference planes				05

**SVKM's Narsee Monjee Institute of Management Studies**  
**Mukesh Patel School of Technology Management & Engineering**

4.	<b>Section and Development of Regular Solids</b> Introduction to section and development of regular solids; Section of regular prisms, pyramids, cylinders, cones; Development of surfaces of right regular solids namely prisms, pyramids, cylinders and cones.	04
5.	<b>Orthographic Projections</b> Principles of orthographic projections, conventions used in quadrant formation, conversion of isometric models to orthographic views and vice-versa, orthographic views of geometrical solids and objects from industry.	04
6.	<b>Sectional Orthographic Projections</b> Principles of sectional orthographic projection, need of sectional views, types of sections, hatching of sectioned part and principles, sectional orthographic views of geometrical solids and objects from industry.	04
7.	<b>Isometric Projections</b> Principles of isometric projection-isometric scale, isometric views, conventions; isometric views of lines, planes, simple and compound solids; conversion of orthographic views to isometric models to and vice-versa; isometrics projections of given views.	04
	<b>Total</b>	<b>30</b>

<b>Lecture (Hours per week)</b>	<b>Practical (Hours per week)</b>	<b>Tutorial (Hours per week)</b>	<b>Credit</b>	<b>Internal Continuous Assessment (ICA) (Marks - 50)</b>	<b>Term End Examinations (TEE) (Marks- 100)</b>
3	2	0	4	Marks Scaled to 50	Marks Scaled to 50
<b>Pre-requisite:</b> Basic knowledge of Electronics Engineering					
<b>Course Objective</b> The objectives of offering this course are to provide a brief overview of Boolean Algebra, Combinational Logic, and Sequential Logic; to understanding the fundamental structure and functions of a computer, including the arithmetic and logic units, as well as the implementation of fixed-point and floating-point arithmetic and finally to learn the different ways of communication with I/O devices.					
<b>Course Outcomes</b> After successful completion of this course, students will be able to- <ol style="list-style-type: none"> <li>1. Understand number systems and Boolean algebra concepts in Digital Systems.</li> <li>2. Apply concepts of Combinational and Sequential logic for designing Circuits.</li> <li>3. Understand the fundamental structure and functioning of a computer, as well as arithmetic operations, and Central Processing Unit.</li> <li>4. Understand the memory organization and working of I/O</li> </ol>					
<b>Detailed Syllabus</b>					
<b>Unit</b>	<b>Description</b>				<b>Duration</b>
1.	<b>Boolean Algebra</b> Binary logic functions, Boolean Laws, Truth tables, Associative and distributive properties, De-Morgan's Theorems.				3
2.	<b>Combinational Logic and Circuits</b> Switching equations, Canonical logic forms, Sum of product & Product of sums, Karnaugh maps, Simplification of expressions, Code conversion Design : Decoder, Encoder, Priority encoder, Multiplexers as function generators, Binary Full Adder, Subtractor, BCD adder				7
3.	<b>Sequential Logic and Circuits</b> Flip Flops: Clocked and edge triggered flip-flops, SR Flip-Flop, D Flip-Flop, JK Flip-Flop, T Flip-Flop Registers: Serial input -serial output; serial input-parallel output; Parallel In -Parallel Out, Serial In -Serial Out. Design of Asynchronous and Synchronous Counters, Modulo Counters, UP- DOWN counter.				8
4.	<b>Basic Structure of a Computer System</b> Functional Units, Basic Operational Concepts, Performance Instructions: Language of the Computer, Operations, Operands Instruction representation, Logical operations, decision making, MIPS Addressing.				3
5.	<b>Arithmetic for Computers</b>				3

	Addition and Subtraction, Multiplication Division, Booth Multiplication, Floating Point Representation, Floating Point Operations	
6.	<b>Central Processing Unit</b> Major Components of CPU, Instruction Formats, Addressing Modes, Data Transfer and manipulation, Program Control, Subroutine Call and Return, RISC vs CISC, Pros and Cons of RISC and CISC.	6
7.	<b>Memory Organization:</b> Internal Memory – Memory characteristics and memory hierarchy, Cache memory: Elements of cache design, Address mapping and translation-Direct mapping, Address mapping and translation-Associative mapping, Address mapping and translation -Set associative mapping, Performance characteristics of two level memory, Semiconductor main memory- Types of RAM, DRAM and SRAM. Semiconductor main memory- Advanced DRAM organizations, Chip logic, Memory module organization. High speed memories- Associative memory, High speed memories-Interleaved memory.	10
8.	<b>Input and Output Unit:</b> Input and output- External Devices, Keyboard, Monitor, Disk drive and device driver. I/O modules- Programmed I/O, I/O modules- Interrupt Driven I/O, DMA. I/O modules- I/O channels and I/O processors, Serial transmission and synchronization.	5
